FACULTY OF ENGINEERING
PES UNIVERSITY**

(Established under Karnataka Act No. 16 of 2013)
100ft Ring Road, Bengaluru – 560 085, Karnataka, India

Problem Statement:

In modern hectic life, people are finding it difficult to plan meals, prepare ingredients, and follow a healthy and balanced diet. This is compounded by the absence of a personalized web source that considers the users taste, pantry inventory, and ahead-of-time planning.

The purpose of this project is to develop an intelligent and centralized Recipe, Pantry, and Meal Planning Application that can allow users to:

- Search and store recipes by name, filter, and cuisine.
- Keep a personal store of ingredients to automatically adjust shopping lists.
- Customize individual meals and create 7-day meal plans.
- Receive cuisine-specific recommendations and coordinate their dietary flow effectively with built-in shopping assistance.

Key Features:

1. Recipe Management:

- View, create, edit, and delete recipes.
- View detailed recipe pages.
- Filter and search recipes by name, ingredient, or selected cuisine.

2. Pantry System:

- Maintain a list of ingredients already available (User Pantry).
- Automatically adjust the shopping list by subtracting pantry items from recipe needs.
- Prompt users to enter or update pantry stock before generating a shopping list.

3. Shopping List Generation:

- Generate a dynamic shopping list based on selected recipes and existing pantry ingredients.
- Update the list as users add/remove recipes or update pantry items.

4. Meal vs Meal Plan:

- Meal Management: Choose meals (breakfast, lunch, dinner, snacks) from recipes.
- Meal Planning: Plan meals across 7 days, selecting recipes for each day and meal slot.
- Add/remove meals to/from the meal plan with ease.
- View and update current 7-day meal plans.

5. Cuisine-Based Recommendations:

- Allow users to filter or get suggested recipes based on selected cuisines (e.g., Italian, American, Asian).
- Tailor meal plans and search results accordingly.

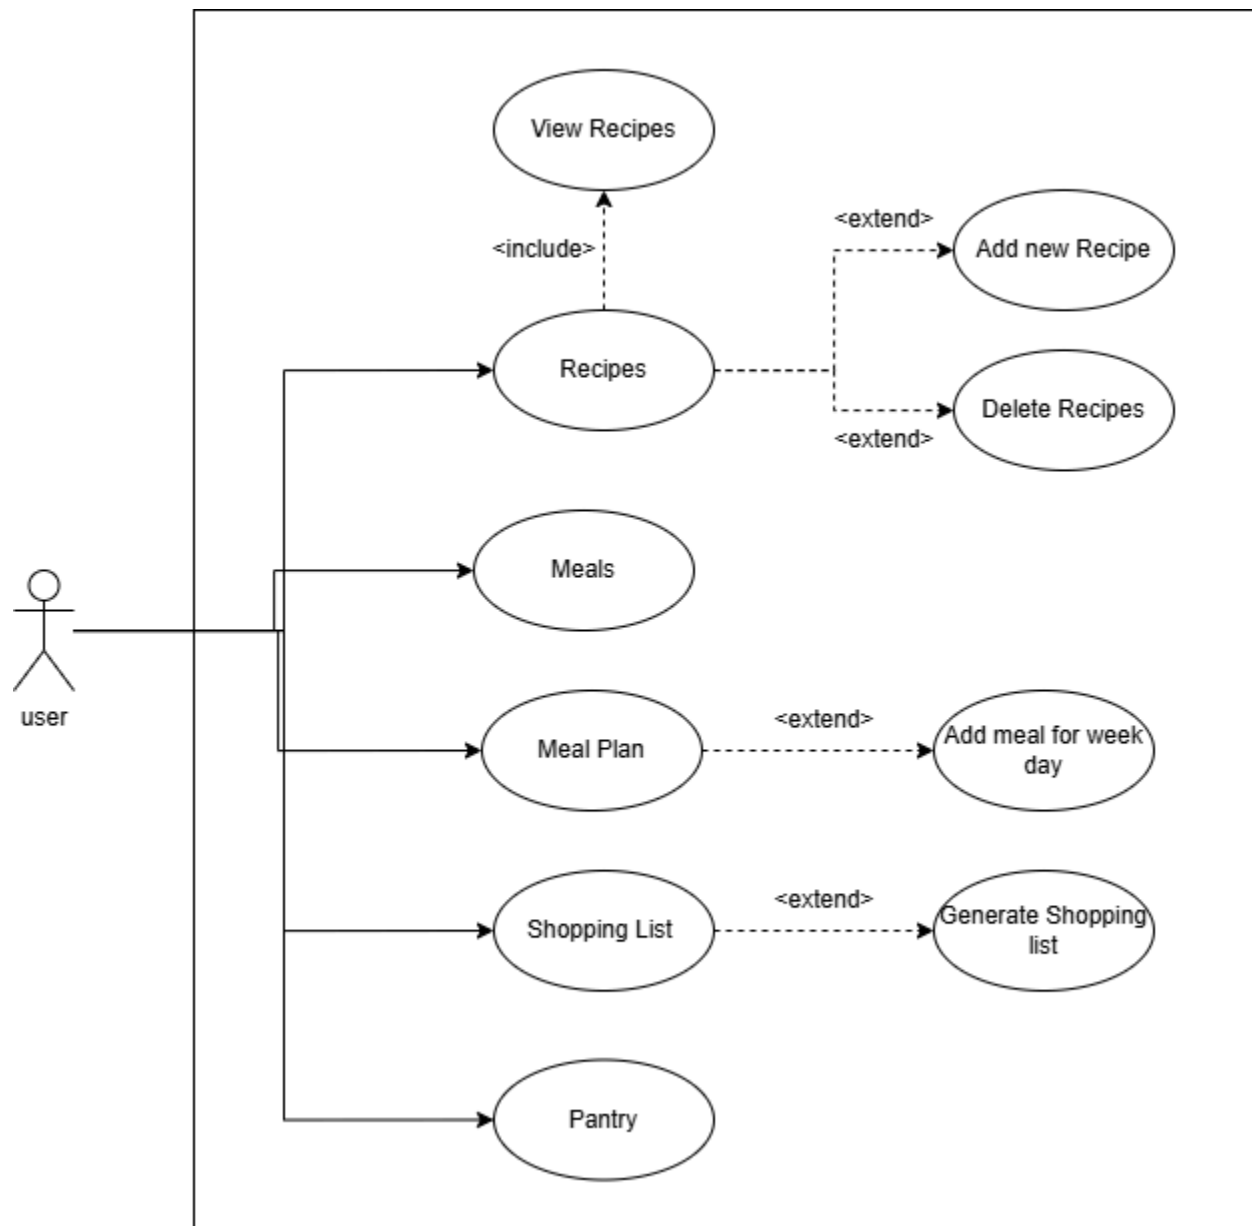

6. User Navigation Flow:

- Smooth navigation from homepage to recipes, search, pantry, shopping list, and meal planning.
- Support for intuitive user actions (e.g., search by filter/cuisine, add meal, generate shopping list)

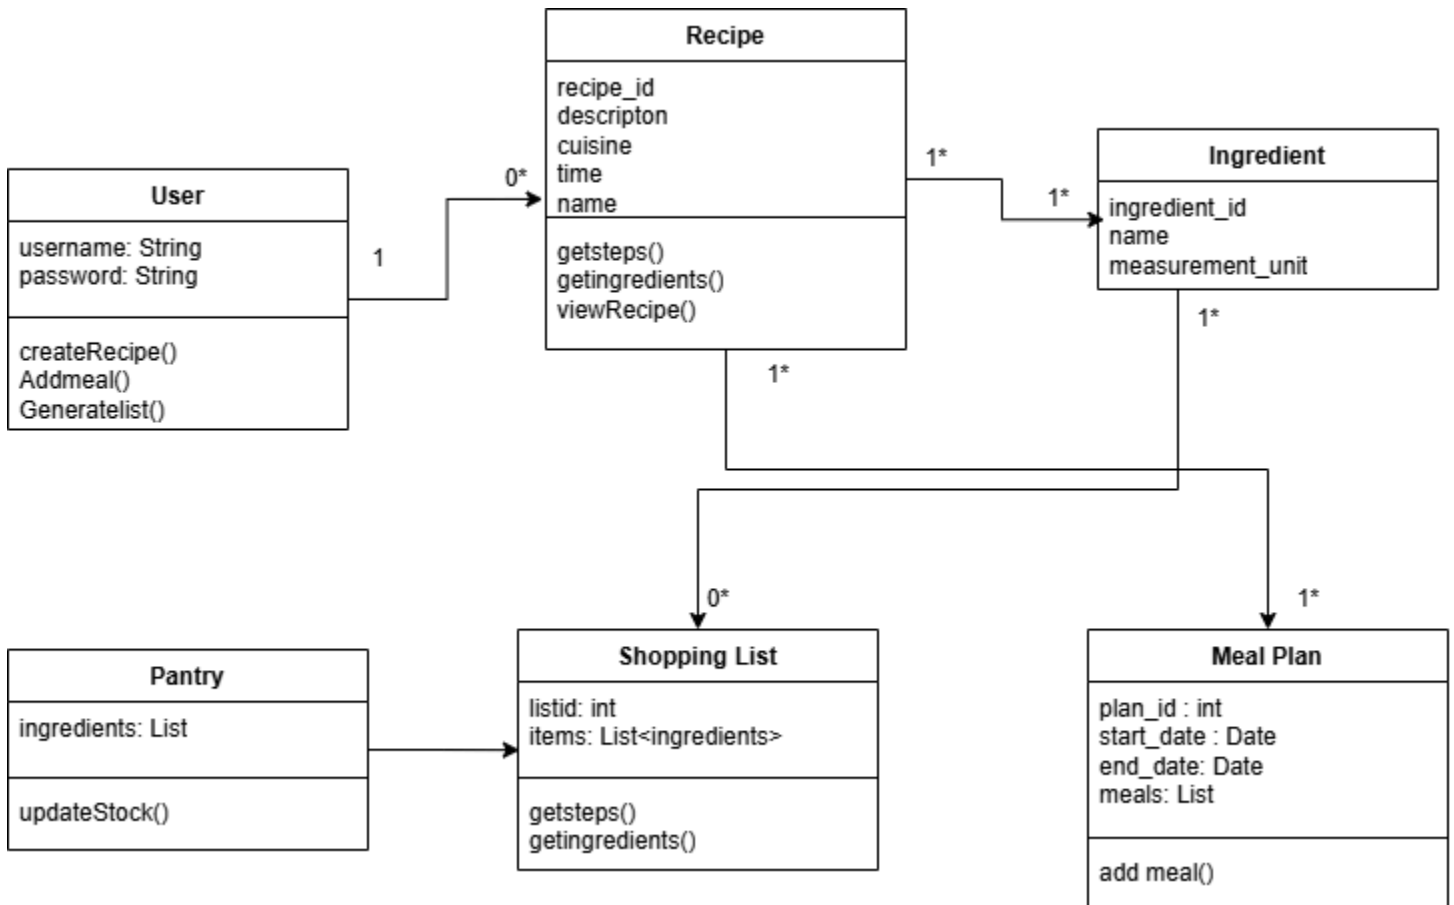

Models:

- **Ingredients.java**
- **Meal.java**
- **MealBuilder.java**
- **MealPlan.java**
- **Recipe.java**
- **RecipeBuilder.java**
- **RecipeIngredient.java**
- **RecipeStep.java**
- **ShoppingItem.java**
- **ShoppingList.java**
- **ShoppingListItem.java**
- **User.java**
- **UserIngredient.java**

Ingredient Tracking and Shopping List

1. Major Use case

- a. Recipe Management
- b. Recipe Search and Filtering
- c. Meal Planning
- d. Shopping List Generator

2. Minor Use case

- a. Favorites and Ratings
- b. 6- Recipe Blog
- c. Nutritional Information
- d. Tracking of Ingredients
